**SEVERE WEATHER ACTION PLAN**

Upon early warning, volunteers will attempt to set former Fire Siren to a **STEADY TONE**. This warning is to inform you to seek information from TV or RADIO. For residents that do not have adequate shelter, the Lutheran Church, 207 University Street, has offered the use of the church basement. Every effort will be made to get the rear (south) doors opened on alarm. **YOU SHOULD MAKE ALTERNATE PLANS IN THE EVENT THE CHURCH IS NOT OPEN!!**

Having a plan in place will minimize confusion when time is of the essence. Preplanning to bring flashlights, possibly a blanket, as well as making other arrangements for pets will make for quick access to shelter. (Please do not bring pets to the church).

***This plan will be in effect immediately and until further notice.***

"Weather Alert" radios are available for purchase at local electronics or major department stores. These units can be used in addition to the local warning siren for early severe storm alerts.

## 2005 CONSUMER CONFIDENCE REPORT FOR 61702641 ELK MOUND WATERWORKS

### WATER SYSTEM INFORMATION

If you would like to know more about the information contained in this report, please contact Terry Stamm at 715-879-5805.

### HEALTH INFORMATION

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's safe drinking water hotline (800-426-4791).

Some people may be more vulnerable to contaminants in drinking water than the general population. Immuno-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune systems disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by cryptosporidium and other microbial contaminants are available from the Environmental Protection Agency's safe drinking water hotline (800-426-4791).

### SOURCE(S) OF WATER

Source id	Source	Depth (in feet)
1	Groundwater	280
2	Groundwater	352

**ACCESSING THE DNR WEBSITE:** The source water assessment is intended to provide basic information regarding where your drinking water comes from and the degree to which it may be impacted by potential sources of contamination.

To locate a full assessment for your Public Water Supply system:

1. Go to the Wisconsin Department of Natural Resources website on the internet at <http://dnr.wi.gov>
2. On the left side of the page, left click your mouse on Environmental Protection.
3. Under Environmental Protection, scroll down and left click mouse on Water. This will bring up Division of Water.
4. Under Water Programs, left click mouse on Drinking Water and Groundwater.
5. Under Our Programs, left click mouse on Source Water Assessment Program
6. In the main page left click mouse on Find an Assessment. This will take you to DNR's Water Quality Database.
7. Type in City or Village name of the system you are looking for in the box next to **Elk Mound Waterworks &** press enter.
8. In the box that appears, you will see your facility name, DNR PWS ID#, and whether or not a Source Water Assessment is available.

To obtain a copy of the summary for your facility, left click on the phrase "Summary available."

## EDUCATIONAL INFORMATION

The sources of drinking water, both tap water and bottled water, include rivers, lakes, streams, ponds, reservoirs, springs and wells. As water travels over the surface of the land or through the ground, it dissolves naturally occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity.

Contaminants that may be present in source water include:

- Microbial contaminants, such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations and wildlife.
- Inorganic contaminants, such as salts and metals, which can be naturally- occurring or result from urban stormwater runoff, industrial or domestic wastewater discharges, oil and gas production, mining or farming.
- Pesticides and herbicides, which may come from a variety of sources such as agriculture, urban stormwater runoff and residential uses.
- Organic chemical contaminants, including synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations, urban stormwater runoff and septic systems.
- Radioactive contaminants, which can be naturally occurring or be the result of oil and gas production and mining activities.

In order to ensure that tap water is safe to drink, EPA prescribes regulations that limit the amount of certain contaminants in water provided by public water systems. FDA regulations establish limits for contaminants in bottled water, which shall provide the same protection for public health.

## NUMBER OF CONTAMINANTS REQUIRED TO BE TESTED

This table displays the number of contaminants that were required to be tested in the last five years. The CCR may contain up to five years worth of water quality results. If a water system tests annually, or more frequently, the results from the most recent year are shown on the CCR. If testing is done less frequently, the results shown on the CCR are from the past five years.

Contaminant Group	# of Contaminants
Disinfection Byproducts	1
Inorganic Contaminants	16
Microbiological Contaminants	2
Radioactive Contaminants	1
Synthetic Organic Contaminants including Pesticides and Herbicides	23
Unregulated Contaminants	4
Volatile Organic Contaminants	21

**MICROBIOLOGICAL CONTAMINANTS**

Contaminant	MCL	MCLG	Level Found	Range	Sample Date (if prior to 2005)	Violation	Typical Source of Contaminant
Coliform (TCR)	presence of coliform bacteria in >=5% of monthly samples	0	3			YES	Naturally present in the environment

**INORGANIC CONTAMINANTS**

Contaminant (units)	MCL	MCLG	Level Found	Range	Sample Date (if prior to 2005)	Violation	Typical Source of Contaminant
BARIUM (ppm)	2	2	.002	.002		NO	Discharge of drilling wastes; Discharge from metal refineries; Erosion of natural deposits
COPPER (ppm)	AL=1.3	1.3	.58 (average)	.1900-.6190		NO	Corrosion of household plumbing systems; Erosion of natural deposits; Leaching from wood preservatives
FLUORIDE (ppm)	4	4	1.0 (average)	.3- 1.1		NO	Erosion of natural deposits; Water additive which promotes strong teeth; Discharge from fertilizer and aluminum factories
LEAD (ppb)	AL=15	0	2 (average)	nd- 2.00		NO	Corrosion of household plumbing systems; Erosion of natural deposits
SODIUM	n/a	n/a	1.34	1.34		NO	n/a

**RADIOACTIVE CONTAMINANTS**

Contaminant (units)	MCL	MCLG	Level Found	Range	Sample Date (if prior to 2005)	Violation	Typical Source of Contaminant
GROSS ALPHA, EXCL. R & U (pCi/l)	15	0	3.0	.9- 3.0	09/26/2002	NO	Erosion of natural deposits

**HEALTH EFFECTS FOR ANY CONTAMINANTS WITH MCL VIOLATIONS**

Contaminant	Health Effects
Coliform (TCR)	Coliforms are bacteria which are naturally present in the environment and are used as an indicator that other, potentially-harmful, bacteria may be present. Coliforms were found in more samples than allowed and this was a warning of potential problems.

**DEFINITION OF TERMS**

Term	Definition
AL	Action Level: The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow.
MCL	Maximum Contaminant Level: The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.
MCLG	Maximum Contaminant Level Goal: The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.
pCi/l	picocuries per liter (a measure of radioactivity)
ppm	parts per million, or milligrams per liter (mg/l)
ppb	parts per billion, or micrograms per liter (ug/l)
TCR	Total Coliform Rule

**Congratulations**

The Village of Elk Mound would like to extend their appreciation to Len Hemenway for 20 years of service. Len is a familiar face around the Village, working in all phases of the Public Works Department.

**Thanks for All Your Hard Work Len!**
